### **BRITA-in-Pubs at Camelia symposium in Styer in Austria**

The BRITA in Pubs-project was presented at the Camelia conference under the topic Socio-economic methods – focused on ecobuilding projects. The presentation was on barriers of energy efficiency in public buildings, methods used, results from questionnaire and communication plan. Download the presentation on the BRITA-homepage.

### **Another satisfying monitoring result at Borgen Community Centre**

The energy concept has once more proved itself right. Even with a larger area included the average energy use per square meter is lower than last year. Also experiences obtained after these first years are reported including technical aspects of the heat pump, problems related to the ventilation culverts and location of infrared motion sensors. The difficulties have been minor thus leaving Borgen Community Centre as a very successful low-energy demonstration project. Read more at the Brita-homepage.

### **Updated information about the UK financial schemes**

This news item presents an updated list and description of the programme for financial schemes in UK covers both building stocks, possibilities for loans, capital allowances and focus on small scale initiatives. The Low Carbon Building Programme pays a special focus on public projects and will not be available for profit and commercial organisations. Read more about the financial schemes at the BRITA-homepage.
